Preventative Maintenance

Preventative maintenance is one of Connex Solutions key work pillars. It is completed on critical electrical infrastructure and reduces the risk of personal harm & property damage.

The process of preventative maintenance involves regular checks to critical equipment and assets, in order to keep them running – preventing unplanned downtime.

A successful maintenance strategy requires planning and scheduling maintenance of equipment before a problem occurs.

Benefits of Preventative Maintenance

A regular preventative maintenance strategy will provide you with;

- Less equipment downtime
- Fewer interruptions to critical operations
- Longer asset life
- Improved efficiency (assets in good condition operate better)
- Increased workplace safety and improved compliance with OHS

Key recommendations for PM in all industries:

Switchboard thermographic surveys	Emergency & Exit light testing
RCD & Safety switch testing	External security lighting

Preventative Maintenance Plan

See how we can create a bespoke annual preventative maintenance plan with an electrical asset management system which complies with government legislation.

1	2	3	4
Site Verification	Annual PM Plan	Asset Register	Annual Reports
Site visit to discuss your critical electrical infrastructure	Submit a 12-month PM works schedule to client	Connex Solutions complete a register of critical assets	Compliant report of all preventative maintenance works
